

## **2.7 San José Clean Energy Load Management Standards Compliance Plan.**

### **Recommendation:**

Adopt a resolution approving and adopting the San José Clean Energy Load Management Standards Compliance Plan as required by the California Energy Commission.

CEQA: Not a Project, File No. PP17-008, General Procedure and Policy Making resulting in no changes to the physical environment. (Energy)

COUNCIL AGENDA: 3/19/24  
FILE: 24-73589  
ITEM: 2.7

## Memorandum

**TO:** HONORABLE MAYOR  
AND CITY COUNCIL

**FROM:** Lori Mitchell

**SUBJECT:** SEE BELOW

**DATE:** February 26, 2024

Approved

Date

3/5/24

**SUBJECT: SAN JOSÉ CLEAN ENERGY LOAD MANAGEMENT STANDARDS  
COMPLIANCE PLAN**

### **RECOMMENDATION**

Adopt a resolution approving and adopting the San José Clean Energy Load Management Standards Compliance Plan as required by the California Energy Commission.

### **SUMMARY AND OUTCOME**

The City Council's adoption of the San José Clean Energy Load Management Standards Compliance Plan (Plan), and the Plan itself, allow San José Clean Energy to meet Load Management Standards (LMS) regulatory requirements<sup>1</sup>. These regulations mandate large Community Choice Aggregators, such as San José Clean Energy, to achieve goals related to encouraging the use of energy at off-peak hours, encouraging the control of peak loads to improve electric system efficiency and reliability, and reducing fossil fuel consumption and greenhouse gas emissions. The attached Plan describes how San José Clean Energy will work towards these goals. City Council's adoption of the Plan and its subsequent submission to the California Energy Commission is required under state regulations.

### **BACKGROUND**

The California Energy Commission regulates load management in the state. Load management refers to balancing electric supply with demand by adjusting the timing or amount of electricity used. By codifying load management standards, the state encourages electric customers to shift

---

<sup>1</sup> See 20 California Code of Regulations §1623.1

their electricity use away from high demand periods, when polluting generators are in use, to times when lower-cost, clean electricity is available.

The most recent amendments to the Load Management Standards intend to provide consumers more timely and accurate information on electricity costs to help manage their energy use. In implementing the Load Management Standards, the California Energy Commission mandates that most load-serving entities, including large Community Choice Aggregators like San José Clean Energy, meet the goals noted above, in part by:

- Developing retail rates that change at least hourly to reflect grid costs and greenhouse gas emissions that are approved by their governing board (called time-dependent or time-of-use rates);
- Maintaining up-to-date rates in a state database that provides a central repository for all rate information; and
- Educating customers about time-dependent rates and automation technologies.

As part of executing the Load Management Standards, each load-serving entity must develop a plan describing how it will meet the Standards' goals and comply with regulations. The plan requires adoption by the load-serving entity's rate approving body at a noticed public meeting. See **Attachment** – Draft San José Clean Energy Load Management Standards Compliance Plan.

## **ANALYSIS**

The City Council's adoption of the Plan at a noticed public meeting is a regulatory requirement. Once adopted, San José Clean Energy staff will submit the Plan to the California Energy Commission, who then approves plans that are consistent with the Load Management Standards regulations and show a good faith effort to meet the above goals. Neither the Plan nor the Load Management Standards set rates or mandate any particular rate structure.

### ***Climate Smart San José Analysis***

The recommendation in this memorandum is consistent with one or more Climate Smart San José energy, water, or mobility goals. The recommended action supports Climate Smart San José (action 1.1 Transition to a Renewable Energy Future) and the Envision San José 2040 General Plan (Goal MS-2 and Appendix 8: GHG Reduction Strategy).

## **EVALUATION AND FOLLOW-UP**

Should the California Energy Commission require any substantial modification to the Plan, staff will submit a memorandum to the City Council detailing the reason for the requested modification and the specific Plan changes made in response.

HONORABLE MAYOR AND CITY COUNCIL

February 26, 2024

**Subject: San José Clean Energy Load Management Standards Compliance Plan**

Page 3

### **COORDINATION**

This memorandum has been coordinated with the City Attorney's Office and the City Manager's Budget Office.

### **PUBLIC OUTREACH**

This memorandum will be posted on the City's Council Agenda website for the March 19, 2024 City Council meeting.

### **COMMISSION RECOMMENDATION AND INPUT**

No commission recommendation or input is associated with this action.

### **CEQA**

Not a Project, File No. PP17-008, General Procedure and Policy Making resulting in no changes to the physical environment.

### **PUBLIC SUBSIDY REPORTING**

This item does not include a public subsidy as defined in section 53083 or 53083.1 of the California Government Code or the City's Open Government Resolution.

## 1 Executive Summary

San José Clean Energy (SJCE) respectfully submits this Load Management Standards Compliance Plan to the California Energy Commission (CEC) Executive Director as required by Title 20, California Code of Regulations (CCR) section 1623.1.

This plan outlines SJCE's current participation in dynamic rate initiatives, including uploading rates to CEC's Market Informed Demand Automation Server (MIDAS) database, and developing load flexibility programs. While SJCE lacks comprehensive data for an exhaustive evaluation, SJCE appreciates the importance of assessing the cost-effectiveness, technological feasibility, and equity impacts of implementing dynamic rates to meet California's clean energy and climate goals and has undertaken a good faith effort to plan to meet LMS goals.

SJCE's Load Management Standards (LMS) Compliance Plan was publicly posted on the City of San José's website on March 8, 2024, and heard at a public meeting before City Council on March 19, 2024. This compliance plan was adopted by City Council, SJCE's rate-approving body, during that same public meeting on March 19, 2024. Following its approval by City Council, this plan will be filed with the CEC.

## 2 Background

SJCE is a not-for-profit Community-Choice Aggregator (CCA) administered by the City of San José's Energy Department. SJCE serves 4,000 gigawatt-hours of load annually to over 350,000 residential and commercial accounts representing nearly one million residents and more than 63,000 businesses. With community support and local advocacy, SJCE was unanimously approved by the San José City Council in May 2017 and began serving most residential and commercial customers in San José in February 2019.

As a City program, SJCE is subject to the requirements of Title 26 of the San José Municipal Code and is governed by San José's City Council, with input from a Climate Advisory Commission and the public. The City Council has solitary rate-setting authority with rates discussed and approved at noticed, open public meetings.

SJCE prioritizes reliability, consumer equity, and affordability and has made a good faith effort to develop this Compliance Plan with these priorities in mind.

## 3 Load Management Standards

The CEC's LMS aim to encourage electricity customers to shift electricity use away from high demand hours, when polluting generators are in use, to times when lower-cost clean electricity is available. The LMS seek greater grid resilience, efficiency, and reduced fossil fuel reliance by urging CCAs to develop voluntary retail rates that change at least hourly to reflect grid costs and greenhouse gas emissions. SJCE recognizes that the LMS represent one of many important steps in achieving California's clean energy, climate, and grid resilience goals.

April 1, 2023 amendments to the LMS regulation imposed new requirements on the largest investor-owned and publicly owned utilities, as well as CCAs like SJCE. Specifically, the revised LMS regulation compels large CCAs to embark on a planning process to develop "marginal cost-based rates or public programs." In response to the LMS, codified in 20 CCR § 1623.1(a)(1), SJCE is required to develop and

submit a Compliance Plan that identifies strategies to meet specified requirements. The LMS regulation requires large CCAs to submit a Compliance Plan for review and a vote by our rate-approving body by April 1, 2024. Such a compliance plan is to analyze and determine whether the adoption of dynamic rates for certain customer classes is technologically feasible, equitable, and cost-effective within the LMS timeline. Per 20 CCR § 1623.1(b)(2), SJCE is required to propose to our rate-approving body a voluntary cost-effective real-time pricing (RTP) rate for one customer class by July 1, 2025. Additionally, 20 CCR § 1623.1(a)(1)(C) requires that each large CCA's compliance plan is reviewed at least every three years.

#### 4 Access to Price Signals (Time-dependent Rate Submission to MIDAS)

20 CCR § 1623.1(c) requires that CCAs upload all existing time-dependent rates to the CEC's MIDAS database and keep all available time-dependent rates current by uploading as they are approved, prior to taking affect.

##### 4.1 Existing Rates Uploaded to MIDAS

SJCE's time-dependent rates are available on the MIDAS database. SJCE successfully uploaded 501 rate permutations of existing time-dependent rates to MIDAS as required by 20 CCR § 1623.1(c), by the deadline of August 1, 2023, as modified by CEC Order No. 23-0531-10 (Order). On October 1, 2023, SJCE uploaded the remaining 1,504 Rate Identification Numbers (RINs) representing price modifiers as required by the Order. As a CCA, SJCE only provides the unbundled generation component of customer rates, with Pacific Gas and Electric Company (PG&E) uploading distribution rates. A list of all SJCE's rates uploaded to MIDAS can be found in the Appendix .

##### 4.2 Future Rate Uploads

SJCE contracts with Calpine to ensure timely and accurate upload of time-dependent rates to the MIDAS database. SJCE will work with Calpine, or another vendor providing similar or equal services, during future rate changes to upload new rates. This process adds an additional two weeks to SJCE's current rate change timeline.

##### 4.3 Plan for Providing RINs on Customer Bills

SJCE is a CCA in PG&E territory and SJCE customers receive their final energy statements from PG&E. As such, CCAs have been in conversation with PG&E on the process, presence, and presentation of RINs on customer bills. On January 16, 2024, PG&E filed advice letter 7136-E detailing the addition of RINs for dynamic rates to customer bills<sup>1</sup>. This advice letter states that customer energy statements will have a machine-readable QR code with the corresponding RIN on the top right corner effective March 31, 2024. SJCE intends to continue discussions with PG&E to implement RINs on unbundled customer bills by the required April 1, 2024 deadline.

##### 4.4 Participation in Single Statewide Tool Development and Implementation

20 CCR § 1623(c)(2)(B) requires that parties collaborate to develop and submit the single statewide standard tool for CEC approval by October 1, 2024. The tool is required to provide RINs to customers' premises, the RINs that a customer is eligible for, bill estimations based on a customer's current rate and

---

<sup>1</sup> [https://www.pge.com/tariffs/assets/pdf/adviceletter/ELEC\\_7136-E.pdf](https://www.pge.com/tariffs/assets/pdf/adviceletter/ELEC_7136-E.pdf)

other eligible rates, and allow authorized third parties to modify a customer's rate per customer request.

SJCE staff from the Regulatory and Compliance team and the Accounts and Marketing team participated in the January 17, 2024, CEC-hosted workshop, which provided a status update on the development of the statewide rate access tool. Additionally, SJCE staff supported the development of materials for discussion shared at the January workshop on behalf of CCAs. SJCE remains committed to continuing active involvement in the development of the single statewide tool. Once a proposed tool is approved by the CEC, SJCE will proceed with the implementation of the tool. However, until that tool is approved by CEC, the expected system upgrades, personnel, and funds needed for implementation are currently unknown to SJCE.

SJCE intends to continue to participate with other stakeholders involved in the development of the single statewide tool. Currently, there is still significant uncertainty about the CEC's expectations for the parameters of the tool itself, the development process, implementation, and the cost recovery for parties.

## 5 San José Clean Energy Dynamic Rates and Load Flexibility Programs

### 5.1 Current Time-Dependent Rates

All SJCE customer classes, excluding lighting and unmetered customers, have access to Time-of-Use (TOU) rates. TOU rates typically comprise some combination of peak, part-peak, off-peak, and super off-peak time periods that include a seasonality component as well. These rates offer customers the opportunity to shift their usage between relatively easily understandable periods, potentially reducing their bills while improving grid reliability and reducing carbon emissions.

#### 5.1.1 TOU Rates

SJCE has 80 TOU rates that mirror the time periods offered by PG&E. TOU rates shape customer demand through pricing signals that influence customers to use electricity during off-peak and part-peak time periods. SJCE is currently limited in its ability to offer more TOU rates and periods or even modify currently available periods due to the way it receives usage data from PG&E. PG&E provides usage data to SJCE in scalar buckets correlating with their TOU buckets. SJCE has only recently been granted the opportunity to receive hourly interval data for a limited number of customers. With the receipt of this selective hourly interval data, SJCE has been exploring options and opportunities to develop its own TOU rates for the first time.

#### 5.1.2 Planned Dynamic Rates

SJCE is interested in participating in one or more of PG&E's proposed dynamic rate pilot programs, which would present an opportunity for SJCE to offer a dynamic rate to customers - despite the limitations that exist with timely access to PG&E-provided usage data.

### **PG&E Day-ahead, Hourly Real-time Pricing Pilot**

SJCE indicated interest in participating in PG&E's Day-ahead, Hourly Real-time Pricing (DAH RTP) pilot program. The pilot program was originally planned as an opt-in dynamic generation charging rate and pilot dynamic export rate for commercial electric vehicle customers, but was subsequently approved as

a pilot dynamic generation import rate for residential and commercial rates (residential E-ELEC, small/medium commercial B-6, and large commercial B-20 rates). The DAH RTP pilot program launch date has been delayed until February 2025 and/or is on pause while PG&E determines the rate schedule eligibility to ensure there is no program overlap.

### **PG&E Expanded Pilot 2**

On January 25, 2024, the California Public Utilities Commission (CPUC) passed the Decision to Expand System Reliability Pilots of Pacific Gas and Electric Company and Southern California Edison Company. This decision directs PG&E to expand its demand flexibility pilot program to commercial, residential, and industrial customers on select rates starting June 2024 through until the end of May 2027. CCAs in PG&E's territory are given the opportunity to participate in the pilot program by June 2025, thus offering real-time pricing rates to certain customer classes. PG&E is expected to offer the Expanded Pilot 2 to commercial, industrial, and residential customers enrolled in the following rates: B-6, B-10, B-19, B-20, E-ELEC, and EV2-A. The CPUC directs that PG&E shall not simultaneously offer both the DAH RTP rate and the PG&E Expanded Pilot 2 to customers on a given rate schedule. PG&E is directed to file an implementation plan for the Expanded Pilot 2 within 60 days of the decision effective date. SJCE is currently considering participation in this demand flexibility pilot program and sees participation as a valuable opportunity. Once PG&E has submitted its implementation plan to the CPUC, SJCE will be able to evaluate the benefits and risks of participation more critically.

## **5.2 Current and Planned Load Flexibility Programs**

### **5.2.1 Peak Rewards Program**

In May of 2023, SJCE launched its first self-funded and in-house administered demand response program, Peak Rewards. The Peak Rewards Program is a non-residential, behavioral event-based demand response program in which commercial customers voluntarily elect to participate. The Peak Rewards Program compensates participating customers to reduce energy use during two- to four-hour events between the hours of 4 p.m. and 10 p.m., between the months of May through October.

In the case of an upcoming event, participating customers are given advance notice via email or text, unless events such as grid emergencies deem a shorter notice necessary. Prior to the event, commercial customers may opt-out of participating in the specific event. During the event, participants attempt to reduce energy consumption as much as feasible. After a given event, customers are notified of their energy savings and compensation based on the kilowatt hours reduction. Incentive payments for energy savings are then bundled and applied to their PG&E bill.

Currently, there are nine commercial customers participating, totaling 1 megawatt (MW) of peak load reduction.

### **5.2.2 Planned Load Flexibility Programs**

While SJCE is relatively new to dynamic rates and programs, we are currently planning a plethora of programs to shift load off-peak, optimize customer affordability, and increase grid resilience. Currently, SJCE is in the process of planning the implementation of several demand response and load flexibility programs.

## Event Based Demand Response

For the summer of 2023, SJCE marketed the Peak Rewards demand response pilot program to large commercial customers. For the remainder of the fiscal year and into fiscal year 2024-2025, SJCE is seeking to operationalize lessons learned from this pilot to launch a full demand response program. SJCE plans to open this full demand response program to all commercial and residential customers enrolled in SJCE. This program will not only expand in size but will also be more robust, supporting automated participation through technologies like smart thermostats, smart power strips, electric vehicle (EV) chargers, and home batteries. SJCE plans to partner with a third-party implementer to launch this expanded program. SJCE expects to reach the goal of establishing a five MW resource after one full year of operation of the full demand response program.

## Electric Vehicle Managed Charging and Telematics

SJCE is considering launching a telematics-based managed charging system program by 2025. Telematics-based charging systems use software to communicate with onboard technology and communications systems in electric vehicles to control when they charge. Several other CCAs have successfully used telematics to shift some of their residential customers' EV charging from the evening peak (4 p.m. to 9 p.m.) and overnight to low-carbon daytime periods<sup>2</sup>. In the planned program, participants are compensated for daytime charging "events" by shifting charging to lower-cost time-of-use periods. SJCE intends to launch the residential managed charging program in two phases. First, open the program to a smaller group of participants and to study whether a scaled-up program will cost-effectively shift load. Second, to expand the program to more EV and/or for a longer duration. CCAs' telematics programs have shown improved grid resiliency by shifting charging during Flex Alerts and other grid emergencies.

## 6 Evaluation of New Dynamic Rates

20 CCR § 1623.1(a)(1)(A) requires that compliance plans include an evaluation of cost-effectiveness, technological feasibility, benefits to the grid and customer, and equity of marginal cost-based rates for customer classes. Such evaluations are to inform the potential proposal of new marginal cost-based rates or the proposal of programs that enable automated response to time-dependent price signals. Presently, SJCE does not have the data or experience to thoroughly evaluate the impacts of dynamic rates. For this reason, we cannot draw a sound conclusion regarding the cost-effectiveness, technological feasibility, customer and grid benefits, or equity impacts of adopting dynamic rates. Nonetheless, this section explores the factors of evaluation to determine the cost-effectiveness, technological feasibility, benefits to the grid and customer, and equity of implementing new dynamic rates.

### 6.1 Cost Effectiveness

One evaluation criterion detailed in the LMS regulations is cost-effectiveness. Without in-house data on location-dependent marginal cost-based rates, SJCE will identify factors and qualitatively estimate the potential costs and benefits of adopting such rates in this section. Currently, there are a handful of pilot

---

<sup>2</sup> Peninsula Clean Energy (PCE) and Silicon Valley Clean Energy (SVCE) have both implemented a managed charging and telematics program with EV.Energy.

programs and studies that analyze the costs and benefits of real-time pricing for which SJCE can draw rough conclusions. Some of these include Valley Clean Energy's AgFIT pilot program and Commonwealth Edison's Hourly Pricing<sup>3</sup>. While various pilot programs have yielded real data that we can make broad estimates from, SJCE is unable to speculate about the impacts of real-time pricing on our own jurisdiction from other territories or utilities at this time. Local factors such as weather, energy policies, housing stock, and many other locally dependent factors critically impact the underlying assumptions and conclusions of the costs and benefits of dynamic rates. SJCE finds it necessary to assess the impacts from pilot programs in our own jurisdiction to accurately estimate the potential risks, costs, and benefits of real-time pricing.

SJCE perceives the following as reasonable factors to influence the cost-effectiveness of dynamic rates.

- *Rate development.* Development of a marginal cost-based rate. The development of a new dynamic rate includes the costs associated with rate design and setup, including the cost of third-party consultant assistance, staff hours, billing system integration and upgrades, and the uploading of the rate into CEC's MIDAS database.
- *Program administration.* This includes ongoing costs to administer the program, including development and maintenance of customer tools, maintenance of CEC MIDAS database, and staff evaluation of effectiveness.
- *Customer education.* Any new rate or program requires significant investment in customer outreach and education. Customer education includes marketing, targeted customer recruitment, and customer education about the benefits of marginal cost-based rates.

Implementing novel and complex rates for each customer class requires a time-intensive, expensive, and involved multistep process. The development of new dynamic rates for each of SJCE's customer classes would require significant investment and administrative capacity to plan, develop, garner approval, and educate customers on new dynamic rates. It is anticipated that developing a rate this complex for a single customer class, from the ground up, would take at least a year.

## 6.2 Benefits to the Grid and Customer

Dynamic price signals that result in significant load shifts hypothetically provide benefits to the grid and SJCE customers. To what extent benefits will be realized in real-world application is currently unknowable to SJCE.

The following list represents some of the factors SJCE considers in evaluating the potential benefits offered by dynamic rates.

- *Avoided energy procurement costs.* More efficient use of lower cost solar energy when available results in reduced reliance on more expensive energy associated with peak load. Less demand during peak hours should reduce wholesale energy prices.
- *Avoided capacity costs.* Shifting customer demand to mid-day will likely reduce pressure to build out additional generation facilities and smooth the demand curve across the day. Furthermore, high resource adequacy prices should decrease as a result.
- *Avoided greenhouse gas emissions.* Off-peak energy tends to be cleaner than peak hour energy, so a shift in customer demand brings benefits to the greenhouse gas emissions profile.

---

<sup>3</sup> <https://icc.illinois.gov/downloads/public/edocket/587138.PDF>

- *Improved reliability.* Strain on the grid is greatest during summer peak hours. Shifting demand will potentially reduce emergency events and decrease transmission upgrade and buildout requirements.

### 6.3 Technological Feasibility

An additional factor of evaluation required by 20 CCR § 1623.1(a)(1)(A) is the technological feasibility of implementing new dynamic rates for all customer classes. Such evaluation includes that of internal technology at SJCE to process rates and customer technology to receive and automate responses to rates.

The following represents factors for consideration in the technological feasibility of adopting dynamic rates.

#### **Internal**

- *Billing system.* SJCE has been limited in its ability to offer dynamic rates due to the way it receives usage data from PG&E. PG&E provides usage data to SJCE in scalar buckets correlating with their TOU buckets. PG&E is upgrading its billing system with an expected launch date in 2027. This is when SJCE expects to receive billing quality interval data for nearly all customers. In the meantime, PG&E will provide billing quality interval data for a limited number of customers.

#### **External**

- *Customer technology.* The benefits of dynamic rates greatly depend on customer participation and the availability of devices and technology that supports automated response to dynamic rates.

### 6.4 Equity

Equity is a key component of dynamic rate evaluation. SJCE is pursuing local municipal priorities like consumer equity and affordability by adopting lower rates for disadvantaged customers and designing community-based programs that increase disadvantaged communities' access to renewable energy and electrification. To build on this equity-focused guiding principle, SJCE has incorporated a suite of equity metrics used to evaluate customer programs and their impact on disadvantaged communities.

At this time, SJCE does not have pilot study data to quantify load shift and bill impact for different customer groups, nor does SJCE have comprehensive quantitative data to evaluate the equity impacts of potential dynamic rates. When data becomes available and analysis is made feasible, SJCE intends to use its equity metrics to evaluate the dynamic rate impacts. Below are the customer program equity metrics along with descriptions of how they might be applied to evaluate the new dynamic rates.

- *Percentage of low- to middle-income communities able to access the program.* There may be a difference among customer groups and ability to access dynamic rate programs. Customers need access to relevant technology as well as technological literacy to respond to dynamic rates. Because dynamic rates are new and require advanced technology, they present an unprecedented set of challenges to customers. If customers do not have the means to respond to high price hours, they may experience greater bill shocks. To help address these barriers, SJCE will continue to promote its electrification programs to lower the barriers to technology adoption and offer customer education about TOU rates and bill impacts.

- *Percentage of program funding directed to disadvantaged and low-income communities.* Customers must understand dynamic rates to respond to them. Dynamic rates are less accessible than TOU rates. TOU rates currently charge customers higher prices between a consistent range of time. Dynamic rates will not be as consistent, and thus, not as easy to understand. SJCE will develop marketing, education, and outreach plans to promote dynamic rate programs.
- *Percentage change in energy burden for participating customers.* This metric will allow SJCE to quantify bill impacts of dynamic rates. For example, customers who cannot fully access dynamic rates could potentially experience increases in energy burden.

SJCE will approach dynamic rate or program design with equity as a priority.

## 7 SJCE's LMS Compliance Approach

SJCE appreciates the CEC providing this opportunity to identify reasonably available pathways to increase grid resiliency and reduce greenhouse gas emissions through dynamic rates and load flexibility programs. Currently, SJCE neither has the data nor the quantitative confidence to propose plans adopting real-time prices on the CEC's ambitious timeline.

SJCE remains committed to equity, customer affordability, clean energy goals, and grid resilience. SJCE appreciates the state's grid resiliency goals and is eager to contribute the necessary actions while promoting equity and emission reductions. As required by the LMS, SJCE cannot confidently conclude that compliance with the LMS will not result in extreme hardship, or result in reduced system reliability, impede equity, be technologically feasible, or that it would be cost effective.

Currently, SJCE has several load flexibility programs in place. Additionally, we intend to participate in PG&E's DAHRTP and/or Expanded Pilot 2 in the current CPUC Demand Flexibility Proceeding. Unfortunately, participation in PG&E's pilot programs are dependent on factors outside of SJCE's control. While SJCE plans to participate in the Demand Flexibility Expanded Pilot 2, further internal discussion is required prior to electing to participate before June of 2025. Additionally, delays and uncertainty in the DAHRTP pilot has created uncertainty in SJCE's opportunity to gain experience with real-time pricing.

Presently, SJCE lacks experience or data to ensure equity and affordability will not be compromised or that grid resiliency will be meaningfully advanced in adopting dynamic rates. Additionally, SJCE faces significant challenges in adopting rates on a more granular scale than the currently offered PG&E TOU rates. SJCE looks forward to the potential opportunities provided by the receipt of interval data from PG&E, which is not planned until 2028. Regardless, SJCE intends to participate in the dynamic pricing pilots offered by PG&E. Participation in one or more of these pilots along with the adoption of expanded and new load flexibility programs will provide SJCE with the necessary data points to assess the potential impacts and benefits of new dynamic rates and programs.

RESOLUTION NO. \_\_\_\_\_

**A RESOLUTION OF THE COUNCIL OF THE CITY OF SAN JOSE APPROVING AND ADOPTING THE SAN JOSE CLEAN ENERGY LOAD MANAGEMENT STANDARDS COMPLIANCE PLAN AS REQUIRED BY THE CALIFORNIA ENERGY COMMISSION**

**WHEREAS**, the California Energy Commission (“CEC”) regulates load management, which is the balancing of the electric supply with demand by adjusting the timing or amount of electricity used in the State, and establishes standards for load management that encourage electric customers to shift their electricity use away from high demand periods, when polluting generators are in use, to times when lower-cost, clean electricity is available; and

**WHEREAS**, the CEC mandates that each load serving entity, including the City of José’s (“City”) San José Clean Energy (“SJCE”), develop a plan describing how it will meet the CEC’s load management standards; and

**WHEREAS**, staff have developed a plan that outlines SJCE’s current participation in dynamic rate initiatives, including uploading rates to CEC’s Market Informed Demand Automation Server (“MIDAS”) database, and developing load flexibility programs, a copy of which is incorporated and made a part of this Resolution and attached as Attachment A; and

**WHEREAS**, the Load Management Standards Compliance Plan must be approved and adopted by the City Council, San José Clean Energy’s rate approving body, at a noticed public meeting; and

**WHEREAS**, staff recommends that the City approve and adopt the San José Clean Energy Load Management Standards Compliance Plan as required by the CEC and as set forth in Attachment A of this Resolution;

**NOW, THEREFORE**, BE IT RESOLVED BY THE COUNCIL OF THE CITY OF SAN JOSE THAT:

The San José Clean Energy Load Management Standards Compliance Plan as required by the California Energy Commission, attached hereto as Attachment A, is hereby approved and adopted.

ADOPTED this \_\_\_\_\_ day of \_\_\_\_\_, 2024, by the following vote:

1 Executive Summary .....	2
2 Background .....	2
3 Load Management Standards .....	2
4 Access to Price Signals (Time-dependent Rate Submission to MIDAS) .....	3
4.1 Existing Rates Uploaded to MIDAS .....	3
4.2 Future Rate Uploads .....	3
4.3 Plan for Providing RINs on Customer Bills .....	3
4.4 Participation in Single Statewide Tool Development and Implementation .....	3
5 San José Clean Energy Dynamic Rates and Load Flexibility Programs.....	4
5.2 Current Time-Dependent Rates .....	4
5.3 Current and Planned Load Flexibility Programs.....	5
6 Evaluation of New Dynamic Rates .....	6
6.1 Cost Effectiveness .....	7
6.2 Benefits to the Grid and Customer .....	7
6.3 Technological Feasibility .....	8
6.4 Equity .....	8
7 SJCE’s LMS Compliance Approach.....	9
Appendix .....	11
Attachment 1: List of Rates Uploaded to MIDAS .....	11

## 1 Executive Summary

San José Clean Energy (SJCE) respectfully submits this Load Management Standards Compliance Plan to the California Energy Commission (CEC) Executive Director as required by Title 20, California Code of Regulations (CCR) section 1623.1.

This plan outlines SJCE's current participation in dynamic rate initiatives, including uploading rates to CEC's Market Informed Demand Automation Server (MIDAS) database, and developing load flexibility programs. While SJCE lacks comprehensive data for an exhaustive evaluation, SJCE appreciates the importance of assessing the cost-effectiveness, technological feasibility, and equity impacts of implementing dynamic rates to meet California's clean energy and climate goals and has undertaken a good faith effort to plan to meet LMS goals.

SJCE's Load Management Standards (LMS) Compliance Plan was publicly posted on the City of San José's website on March 8, 2024, and heard at a public meeting before City Council on March 19, 2024. This compliance plan was adopted by City Council, SJCE's rate-approving body, during that same public meeting on March 19, 2024. Following its approval by City Council, this plan will be filed with the CEC.

## 2 Background

SJCE is a not-for-profit Community-Choice Aggregator (CCA) administered by the City of San José's Energy Department. SJCE serves 4,000 gigawatt-hours of load annually to over 350,000 residential and commercial accounts representing nearly one million residents and more than 63,000 businesses. With community support and local advocacy, SJCE was unanimously approved by the San José City Council in May 2017 and began serving most residential and commercial customers in San José in February 2019.

As a city program, SJCE is subject to the requirements of Title 26 of the San José Municipal Code and is governed by San José's City Council, with input from a Climate Advisory Commission and the public. The City Council has solitary rate-setting authority with rates discussed and approved at noticed, open public meetings.

SJCE prioritizes reliability, consumer equity, and affordability and has made a good faith effort to develop this Compliance Plan with these priorities in mind.

## 3 Load Management Standards

The CEC's LMS aim to encourage electricity customers to shift electricity use away from high demand hours, when polluting generators are in use, to times when lower-cost clean electricity is available. The LMS seek greater grid resilience, efficiency, and reduced fossil fuel reliance by urging CCAs to develop voluntary retail rates that change at least hourly to reflect grid costs and greenhouse gas emissions. SJCE recognizes that the LMS represent one of many important steps in achieving California's clean energy, climate, and grid resilience goals.

April 1, 2023 amendments to the LMS regulation imposed new requirements on the largest investor-owned and publicly owned utilities, as well as CCAs like San José Clean Energy. Specifically, the revised LMS regulation compels Large CCAs to embark on a planning process to develop "marginal cost-based rates or public programs." In response to the Load Management Standards, codified in 20 CCR §

1623.1(a)(1), San José Clean Energy is required to develop and submit a Compliance Plan that identifies strategies to meet specified requirements. The LMS regulation requires Large CCAs to submit a Compliance Plan for review and a vote by our rate-approving body by April 1, 2024. Such a compliance plan is to analyze and determine whether the adoption of dynamic rates for certain customer classes is technologically feasible, equitable, and cost-effective within the LMS timeline. Per 20 CCR § 1623.1(b)(2), SJCE is required to propose to our rate-approving body a voluntary cost-effective real-time pricing (RTP) rate for one customer class by July 1, 2025. Additionally, 20 CCR § 1623.1(a)(1)(C) requires that each large CCA's compliance plan is reviewed at least every three years.

#### 4 Access to Price Signals (Time-dependent Rate Submission to MIDAS)

20 CCR § 1623.1(c) requires that CCAs upload all existing time-dependent rates to the Commission's MIDAS database and keep all available time-dependent rates current by uploading as they are approved, prior to taking affect.

##### 4.1 Existing Rates Uploaded to MIDAS

SJCE's time-dependent rates are available on the MIDAS database. SJCE successfully uploaded 501 rate permutations of existing time-dependent rates to MIDAS as required by 20 CCR § 1623.1(c), by the deadline of August 1, 2023, as modified by CEC Order No. 23-0531-10 (Order). On October 1, 2023, SJCE uploaded the remaining 1,504 Rate Identification Numbers (RINs) representing price modifiers as required by the Order. As a CCA, SJCE only provides the unbundled generation component of customer rates, with Pacific Gas & Electric (PG&E) uploading distribution rates. A list of all SJCE's uploaded rates can be found in Appendix Attachment 1.

##### 4.2 Future Rate Uploads

SJCE contracts with Calpine to ensure timely and accurate upload of time-dependent rates to the MIDAS database. SJCE will work with Calpine, or another vendor providing similar or equal services, during future rate changes to upload new rates. This process adds an additional two weeks to SJCE's current rate change timeline.

##### 4.3 Plan for Providing RINs on Customer Bills

SJCE is a CCA in PG&E territory and SJCE customers receive their final energy statements from PG&E. As such, CCAs have been in conversation with PG&E on the process, presence, and presentation of RINs on customer bills. On January 16, 2024, PG&E filed advice letter 7136-E detailing the addition of RINs for dynamic rates to customer bills<sup>1</sup>. This advice letter states that customer energy statements will have a machine-readable QR code with the corresponding RIN on the top right corner effective March 31, 2024. SJCE intends to continue discussions with PG&E to implement RINs on unbundled customer bills by the required April 1, 2024 deadline.

##### 4.4 Participation in Single Statewide Tool Development and Implementation

20 CCR § 1623(c)(2)(B) requires that parties collaborate to develop and submit the single statewide standard tool for CEC approval by October 1, 2024. The tool is required to provide RINs to customers'

---

<sup>1</sup> [https://www.pge.com/tariffs/assets/pdf/adviceletter/ELEC\\_7136-E.pdf](https://www.pge.com/tariffs/assets/pdf/adviceletter/ELEC_7136-E.pdf)

premises, the RINs that a customer is eligible for, bill estimations based on a customer's current rate and other eligible rates, and also allow authorized third parties to modify a customer's rate per customer request.

SJCE staff from the Regulatory and Compliance team and the Accounts and Marketing team participated in the January 17, 2024, CEC-hosted workshop, which provided a status update on the development of the statewide rate access tool. Additionally, SJCE staff supported the development of materials for discussion shared at the January workshop on behalf of CCAs. SJCE remains committed to continuing active involvement in the development of the single statewide tool. Once a proposed tool is approved by the CEC, SJCE will proceed with the implementation of the tool. However, until that tool is approved by CEC, the expected system upgrades, personnel, and funds needed for implementation are currently unknown to SJCE.

SJCE intends to continue to participate with other stakeholders involved in the development of the single statewide tool. Currently, there is still significant uncertainty about the CEC's expectations for the parameters of the tool itself, the development process, implementation, and the cost recovery for parties.

## 5 San José Clean Energy Dynamic Rates and Load Flexibility Programs

### 5.2 Current Time-Dependent Rates

All SJCE customer classes, excluding lighting and unmetered customers, have access to Time-of-Use (TOU) rates. TOU rates typically comprise some combination of peak, part-peak, off-peak, and super off-peak time periods that include a seasonality component as well. These rates offer customers the opportunity to shift their usage between relatively easily understandable periods, potentially reducing their bills while improving grid reliability and reducing carbon emissions.

#### 5.2.1 TOU Rates

SJCE has 80 TOU rates that mirror the time periods offered by PG&E. TOU rates shape customer demand through pricing signals that influence customers to use electricity during off-peak and part-peak time periods. SJCE is currently limited in its ability to offer more TOU rates and periods or even modify currently available periods due to the way it receives usage data from PG&E. PG&E provides usage data to SJCE in scalar buckets correlating with their TOU buckets. SJCE has only recently been granted the opportunity to receive hourly interval data for a limited number of customers. With the receipt of this selective hourly interval data, SJCE has been exploring options and opportunities to develop its own TOU rates for the first time.

#### 5.2.2 Planned Dynamic Rates

SJCE is interested in participating in one or more of PG&E's proposed dynamic rate pilots, which would present an opportunity for SJCE to offer a dynamic rate to customers--despite the limitations that exist with timely access to PG&E-provided usage data.

### **PG&E Day-ahead, Hourly Real-time Pricing Pilot**

SJCE indicated interest in participating in PG&E's Day-ahead, Hourly Real-time Pricing (DAHRTTP) pilot. The pilot was originally planned as an opt-in dynamic generation charging rate and pilot dynamic export rate for commercial electric vehicle customers but was subsequently approved as a pilot dynamic generation import rate for residential and commercial rates (residential E-ELEC, small/medium commercial B-6, and large commercial B-20 rates). The DAHRTTP pilot launch date has been delayed until Feb 2025 and/or is on pause while PG&E determines the rate schedule eligibility to ensure there is no program overlap.

## **PG&E Expanded Pilot 2**

On January 25, 2024, the California Public Utilities Commission (CPUC) passed the Decision to Expand System Reliability Pilots of Pacific Gas and Electric Company and Southern California Edison Company. This decision directs PG&E to expand their demand flexibility pilot to commercial, residential, and industrial customers on select rates starting June 2024 through until the end of May 2027. CCAs in PG&E's territory are given the opportunity to participate in the pilot by June 2025, thus offering real-time pricing rates to certain customer classes. PG&E is expected to offer the Expanded Pilot 2 to commercial, industrial, and residential customers enrolled in the following rates: B-6, B-10, B-19, B-20, E-ELEC, and EV2-A. The CPUC directs that PG&E shall not simultaneously offer both the DAHRTTP rate and the PG&E Expanded Pilot 2 to customers on a given rate schedule. PG&E is directed to file an implementation plan for the Expanded Pilot 2 within 60 days of the decision effective date. SJCE is currently considering participation in this demand flexibility pilot and sees participation as a valuable opportunity. Once PG&E has submitted its implementation plan to the Commission, SJCE will be able to evaluate the benefits and risks of participation more critically.

## 5.3 Current and Planned Load Flexibility Programs

### *5.3.1 Peak Rewards Program*

In May of 2023, SJCE launched its first self-funded and in-house administered demand response program, Peak Rewards. The Peak Rewards Program is a non-residential, behavioral event-based demand response program in which commercial customers voluntarily elect to participate. The Peak Rewards Program compensates participating customers to reduce energy use during two- to four-hour events between the hours of 4 p.m. and 10 p.m., between the months of May through October.

In the case of an upcoming event, participating customers are given advance notice via email or text, unless events such as grid emergencies deem a shorter notice necessary. Prior to the event, commercial customers may opt-out of participating in the specific event. During the event, participants attempt to reduce energy consumption as much as feasible. After a given event, customers are notified of their energy savings and compensation based on the kWh reduction. Incentive payments for energy savings are then bundled and applied to their PG&E bill.

Currently, there are nine commercial customers participating, totaling 1 MW of peak load reduction.

### *5.3.2 Planned Load Flexibility Programs*

While SJCE is relatively new to dynamic rates and programs, we are currently planning a plethora of programs to shift load off-peak, optimize customer affordability, and increase grid resilience. Currently,

SJCE is in the process of planning the implementation of several demand response and load flexibility programs.

### **Event Based Demand Response**

For the Summer of 2023, SJCE marketed the Peak Rewards demand response pilot to large commercial customers. For the remainder of the fiscal year and into FY 2024-2025, SJCE is seeking to operationalize lessons learned from this pilot to launch a full demand response program. SJCE plans to open this full demand response program to all commercial and residential customers enrolled in SJCE. This program will not only expand in size but will also be more robust, supporting automated participation through technologies like smart thermostats, smart power strips, EV chargers, and home batteries. SJCE plans to partner with a third-party implementer to launch this expanded program. SJCE expects to reach the goal of establishing a five MW resource after one full year of operation of the full demand response program.

### **Electric Vehicle Managed Charging and Telematics**

SJCE is considering launching a telematics-based managed charging system program by 2025. Telematics-based charging systems use software to communicate with onboard technology and communications systems in electric vehicles to control when they charge. Several other CCAs have successfully used telematics to shift some of their residential customers' EV charging from the evening peak (4 p.m. to 9 p.m.) and overnight to low-carbon daytime periods<sup>2</sup>. In the planned program, participants are compensated for daytime charging "events" by shifting charging to lower-cost time-of-use periods. SJCE intends to launch the residential managed charging program in two phases. First, open the program to a smaller group of participants and to study whether a scaled-up program will cost-effectively shift load. Second, to expand the program to more electric vehicle owners and/or for a longer duration. CCAs' telematics programs have shown improved grid resiliency by shifting charging during Flex Alerts and other grid emergencies.

## **6 Evaluation of New Dynamic Rates**

20 CCR § 1623.1(a)(1)(A) requires that compliance plans include an evaluation of cost-effectiveness, technological feasibility, benefits to the grid and customer, and equity of marginal cost-based rates for customer classes. Such evaluations are to inform the potential proposal of new marginal cost-based rates or the proposal of programs that enable automated response to time-dependent price signals. Presently, SJCE does not have the data or experience to thoroughly evaluate the impacts of dynamic rates. For this reason, we cannot draw a sound conclusion regarding the cost-effectiveness, technological feasibility, customer and grid benefits, or equity impacts of adopting dynamic rates. Nonetheless, this section explores the factors of evaluation to determine the cost-effectiveness, technological feasibility, benefits to the grid and customer, and equity of implementing new dynamic rates.

---

<sup>2</sup> Peninsula Clean Energy (PCE) and Silicon Valley Clean Energy (SVCE) have both implemented a managed charging and telematics program with EV.Energy.

## 6.1 Cost Effectiveness

One evaluation criterion detailed in the LMS regulations is cost-effectiveness. Without in-house data on location-dependent marginal cost-based rates, SJCE will identify factors and qualitatively estimate the potential costs and benefits of adopting such rates in this section. Currently, there are a handful of pilots and studies that analyze the costs and benefits of real-time pricing for which SJCE can draw rough conclusions. Some of these include Valley Clean Energy's AgFIT pilot program and Commonwealth Edison's Hourly Pricing<sup>3</sup>. While various pilots have yielded real data that we can make broad estimates from, SJCE is unable to speculate about the impacts of real-time pricing on our own jurisdiction from other territories or utilities at this time. Local factors such as weather, energy policies, housing stock, and many other locally dependent factors critically impact the underlying assumptions and conclusions of the costs and benefits of dynamic rates. SJCE finds it necessary to assess the impacts from pilots in our own jurisdiction to accurately estimate the potential risks, costs, and benefits of real-time pricing.

SJCE perceives the following as reasonable factors to influence the cost-effectiveness of dynamic rates:

- *Rate development.* Development of a marginal cost-based rate. The development of a new dynamic rate includes the costs associated with rate design and setup, including the cost of third-party consultant assistance, staff hours, billing system integration and upgrades, and the uploading of the rate into CEC's MIDAS database.
- *Program administration.* This includes ongoing costs to administer the program, including development and maintenance of customer tools, maintenance of CEC MIDAS database, and staff evaluation of effectiveness.
- *Customer education.* Any new rate or program requires significant investment in customer outreach and education. Customer education includes marketing, targeted customer recruitment, and customer education about the benefits of marginal cost-based rates.

Implementing novel and complex rates for each customer class requires a time-intensive, expensive, and involved multistep process. The development of new dynamic rates for each of SJCE's customer classes would require significant investment and administrative capacity to plan, develop, garner approval, and educate customers on new dynamic rates. It is anticipated that developing a rate this complex for a single customer class, from the ground up, would take at least a year.

## 6.2 Benefits to the Grid and Customer

Dynamic price signals that result in significant load shifts hypothetically provide benefits to the grid and SJCE customers. To what extent benefits will be realized in real-world application, is currently unknowable to SJCE.

The following list represents some of the factors SJCE considers in evaluating the potential benefits offered by dynamic rates:

- *Avoided energy procurement costs.* More efficient use of lower cost solar energy when available results in reduced reliance on more expensive energy associated with peak load. Less demand during peak hours should reduce wholesale energy prices.

---

<sup>3</sup> <https://icc.illinois.gov/downloads/public/edocket/587138.PDF>

- *Avoided capacity costs.* Shifting customer demand to mid-day will likely reduce pressure to build out additional generation facilities and smooth the demand curve across the day. Furthermore, high resource adequacy prices should decrease as a result.
- *Avoided GHG emissions.* Off-peak energy tends to be cleaner than peak hour energy, so a shift in customer demand brings benefits to the greenhouse gas emissions profile.
- *Improved reliability.* Strain on the grid is greatest during summer peak hours. Shifting demand will potentially reduce emergency events and decrease transmission upgrade and buildout requirements.

### 6.3 Technological Feasibility

An additional factor of evaluation required by 20 CCR § 1623.1(a)(1)(A) is the technological feasibility of implementing new dynamic rates for all customer classes. Such evaluation includes that of internal technology at SJCE to process rates and customer technology to receive and automate responses to rates.

The following represents factors for consideration in the technological feasibility of adopting dynamic rates:

#### **Internal**

- *Billing system.* SJCE has been limited in its ability to offer dynamic rates due to the way it receives usage data from PG&E. PG&E provides usage data to SJCE in scalar buckets correlating with their TOU buckets. PG&E is upgrading their billing system with an expected launch date in 2027. This is when SJCE expects to receive billing quality interval data for nearly all customers. In the meantime, PG&E will provide billing quality interval data for a limited number of customers.

#### **External**

- *Customer technology.* The benefits of dynamic rates greatly depend on customer participation and the availability of devices and technology that supports automated response to dynamic rates.

### 6.4 Equity

Equity is a key component of dynamic rate evaluation. SJCE is pursuing local municipal priorities like consumer equity and affordability by adopting lower rates for disadvantaged customers and designing community-based programs that increase disadvantaged communities' access to renewable energy and electrification. To build on this equity-focused guiding principle, SJCE has incorporated a suite of equity metrics used to evaluate customer programs and their impact on disadvantaged communities.

At this time, SJCE does not have pilot study data to quantify load shift and bill impact for different customer groups, nor does SJCE have comprehensive quantitative data to evaluate the equity impacts of potential dynamic rates. When data becomes available and analysis is made feasible, SJCE intends to use its equity metrics to evaluate the dynamic rate impacts. Below are the customer program equity metrics along with descriptions of how they might be applied to evaluate the new dynamic rates:

- *Percentage of low- to middle-income communities able to access the program.* There may be a difference among customer groups and ability to access dynamic rate programs. Customers need access to relevant technology as well as technological literacy to respond to dynamic rates. Because dynamic rates are new and require advanced technology, they present an unprecedented set of challenges to customers. If customers do not have the means to respond to high price hours, they may experience greater bill shocks. To help address these barriers, SJCE will continue to promote its electrification programs to lower the barriers to technology adoption and offer customer education about time-of-use rates and bill impacts.
- *Percentage of program funding directed to disadvantaged and low-income communities.* Customers must understand dynamic rates to respond to them. Dynamic rates are less accessible than time-of-use rates. Time-of-use rates currently charge customers higher prices between a consistent range of time. Dynamic rates will not be as consistent, and thus, not as easy to understand. SJCE will develop marketing, education, and outreach plans to promote dynamic rate programs.
- *Percentage change in energy burden for participating customers.* This metric will allow SJCE to quantify bill impacts of dynamic rates. For example, customers who cannot fully access dynamic rates could potentially experience increases in energy burden.

SJCE will approach dynamic rate or program design with equity as a priority.

## 7 SJCE's LMS Compliance Approach

SJCE appreciates the CEC providing this opportunity to identify reasonably available pathways to increase grid resiliency and reduce greenhouse gas emissions through dynamic rates and load flexibility programs. Currently, SJCE neither has the data nor the quantitative confidence to propose plans adopting real-time prices on the CEC's ambitious timeline.

SJCE remains committed to equity, customer affordability, clean energy goals, and grid resilience. SJCE appreciates the state's grid resiliency goals and is eager to contribute the necessary actions while promoting equity and emission reductions. As required by the LMS, SJCE cannot confidently conclude that compliance with the LMS will not result in extreme hardship, or result in reduced system reliability, impede equity, be technologically feasible, or that it would be cost effective.

Currently, SJCE has several load flexibility programs in place. Additionally, we intend to participate in PG&E's DAH RTP and/or Expanded Pilot 2 in the current CPUC Demand Flexibility Proceeding. Unfortunately, participation in PG&E's pilots are dependent on factors outside of SJCE's control. While SJCE plans to participate in the Demand Flexibility Expanded Pilot 2, further internal discussion is required prior to electing to participate before June of 2025. Additionally, delays and uncertainty in the DAH RTP pilot has created uncertainty in SJCE's opportunity to gain experience with real-time pricing.

Presently, SJCE lacks experience or data to ensure equity and affordability will not be compromised, or that grid resiliency will be meaningfully advanced in adopting dynamic rates. Additionally, SJCE faces significant challenges in adopting rates on a more granular scale than the currently offered PG&E TOU rates. SJCE looks forward to the potential opportunities provided by the receipt of interval data from PG&E, which is not planned until 2028. Regardless, SJCE intends to participate in the dynamic pricing pilots offered by PG&E. Participation in one or more of these pilots along with the adoption of expanded

and new load flexibility programs will provide SJCE with the necessary data points to access the potential impacts and benefits of new dynamic rates and programs.
